RESEARCH HIGHLIGHTS

Multi-boson Production as a Probe of New Physics 2007 –

My group has made extensive study of multi-boson (involving W, Z, Higgs boson h) production at hadron colliders:

- Stringent limits on the production of new particles decaying to multi-boson states and constraints on new physics EPJC 80 (2020), JHEP 04 (2019), PRD 100 (2019), PLB 790 (2019), PRD 98 (2018), JHEP 03 (2018) 009, JHEP 03 (2018) 042, PLB 765 (2017), EPJC 77 (2017), JHEP 09 (2016), PLB 755 (2016), JHEP 01 (2016), EPJC 76 (2016), EPJC 75 (2015), JHEP 01 (2015), PLB 737 (2014), PLB 718 (2012), PRL 107 (2011) 231801, PRL 107 (2011) 041802, EPJC 71 (2011)
- First measurement of ZZ production at a hadron collider PRL 100 (2008)
- First observation of WZ production PRL 98 (2007)
- Authored two review articles on electroweak and diboson physics RMP 84 (2012), ARNPS 61 (2011)
- Served as Chapter Editor for a review article on Di-Higgs Production Rev. Phys. 5 (2020)

Higgs Boson Discovery and Measurement 2012, 2015

My group contributed to the Higgs boson discovery PLB 716 (2012), which led to the 2013 Nobel Prize in Physics for its theoretical prediction, through analysis of the $\ell\nu\ell\nu$ channel and the observation of $h \to WW^{(*)}$ PRD 92 (2015).

Resolution of a b-baryon Lifetime Puzzle 2007

I led an analysis measuring the Λ_b^0 lifetime $\tau(\Lambda_b^0)$ in the exclusive decay $\Lambda_b^0 \to J/\psi\Lambda^0$. At the time of publication PRL 98 (2007), this was the most precise $\tau(\Lambda_b^0)$ measurement and higher than the previous world average by 3.2σ. This measurement resolved the long-standing "Λ_b^0 Lifetime Puzzle" in favor of the early theory calculations of $\tau(\Lambda_b^0)$.

Resolution of the Solar Neutrino Problem 2001

My analysis of ^{8}B solar neutrino data from the Sudbury Neutrino Observatory (SNO) collaboration provided the first direct evidence for ν_e flavor change and resolved the decades-long "Solar Neutrino Problem". The first SNO paper PRL 87 (2001) result was based on my thesis work and led to the 2016 Breakthrough Prize in Fundamental Physics and 2015 Nobel Prize in Physics (A. McDonald, T. Kajita) for the observation of ν_e flavor change.
